

4.10.1	Decimals	69
4.10.2	\limsup and \liminf	70
4.10.3	Shrinking Diameters	72
4.11	The Euclidean Norm	73
4.12	Exercises	74
5	Infinite Series of Numbers	77
5.1	Basic Considerations	77
5.2	Absolute Convergence	79
5.3	Exercises	83
5.4	More Tests for Convergence	84
5.4.1	Convergence Because of Cancellation	84
5.4.2	Ratio And Root Tests	86
5.5	Double Series	88
5.6	Exercises	91
6	Continuous Functions	93
6.1	Continuity at Every Point of $D(f)$	96
6.2	Exercises	97
6.3	The Extreme Values Theorem	99
6.4	The Intermediate Value Theorem	100
6.5	Connected Sets	101
6.6	Exercises	103
6.7	Uniform Continuity	105
6.8	Exercises	105
6.9	Sequences and Series of Functions	107
6.10	Weierstrass Approximation	110
6.11	Ascoli Arzela Theorem*	113
6.12	Space Filling Continuous Curves	114
6.13	Tietze Extension Theorem	115
6.14	Exercises	116
7	The Derivative	119
7.1	Limit of a Function	119
7.2	Exercises	122
7.3	The Definition of the Derivative	123
7.4	Continuous and Nowhere Differentiable	127
7.5	Finding the Derivative	129
7.6	Local Extreme Points	131
7.7	Exercises	132
7.8	Mean Value Theorem	135
7.9	Exercises	137
7.10	Derivatives of Inverse Functions	138
7.11	Derivatives and Limits of Sequences	140
7.12	Exercises	142
8	Power Series	145
8.1	Functions Defined in Terms of Series	145
8.2	Operations on Power Series	147
8.3	The Special Functions of Elementary Calculus	150
8.3.1	Sines and Cosines	150
8.3.2	The Exponential Function	153
8.4	\ln and \log_b	154
8.5	The Complex Exponential	155
8.6	The Binomial Theorem	156
